120 ECTS over 2 years

**Part-time** <sup>PT</sup>  
120 ECTS over 3 years

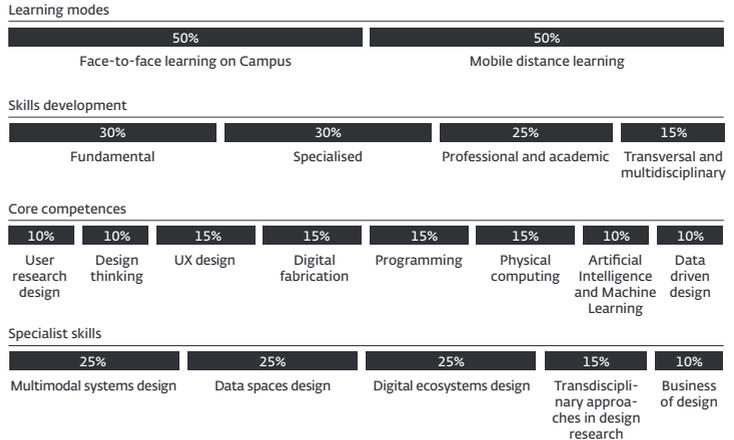

For further  
information

## What it is about

The Master of Arts in Interaction Design combines design thinking, user experience design, user-centred research, rapid prototyping techniques, digital fabrication, software and hardware programming to train professionals prepared to work in multidisciplinary and international teams, in the most innovative fields of industry, technology and design.

## How it is structured

## Why choose this Master's degree

The learning-by-doing and the creative approach to the use of cutting-edge technologies enable the fusion of design and research for the development of interactive systems, data-based environments and intelligent digital services. The mobility year allows professional and academic skills to be strengthened in an internship and consolidated in the thesis project.

## Professional perspectives

The interaction designer pursues careers in design agencies, industries and international start-ups, in multidisciplinary fields where digital transformation is a competitive advantage. The interaction designer progresses their career in all organisations, taking on the role of a senior UX/UI designer, creative or executive director.

## Educational perspectives

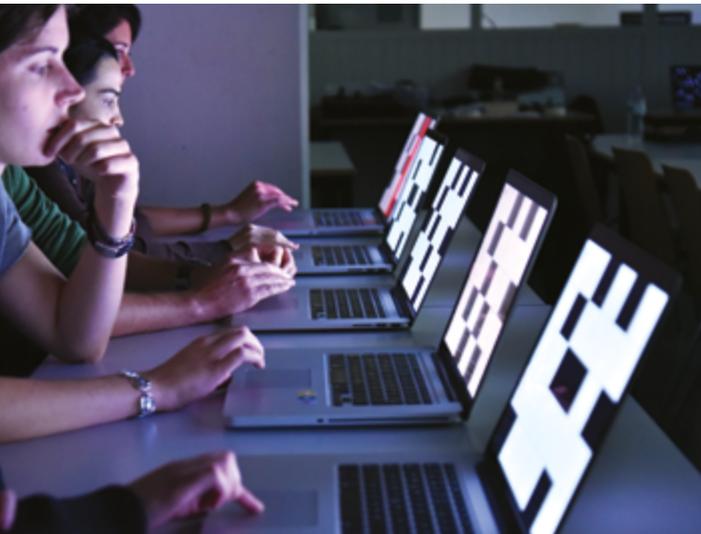

It is possible to gain access to PhDs according to the modalities foreseen by the different university institutions.

## Admission requirements

Admission is possible with a Bachelor's degree in a design field (graphic design, industrial design, interior design, media design, etc.) and in architecture, engineering, humanities, arts and economics. Further information on requirements can be found on the Master's webpage through the QRcode.

## How to register

The application for admission must be submitted exclusively online on the SUPSI Student Portal.
