12:25  The EIT Manufacturing Double Degree Master Program  
   •  Prof. Donatella Corti

12:45  Live Q&A

The Master of Science in Engineering

The Master of Science in Engineering (MSE) offers you the highest possible degree from a Swiss University of Applied Sciences in the areas of engineering, IT and construction and planning. The MSE trains both technical and management leaders, destined for careers in industry and the public sectors. Students acquire the skills needed for careers in departments such as research and development, production, logistics, consultancy and public institutions and are capable of taking responsibility for managing interdisciplinary projects.

The EIT Manufacturing Double Degree Master Program

In 2020 the Innovation Community within the European Institute of Innovation & Technology (EIT) launched the EIT Manufacturing Master School, a Master's program jointly developed by SUPSI and 8 other prestigious European universities. The EIT Manufacturing Master program aims to attract top talents to further empower them through mobility and other learning opportunities to become leading innovators and entrepreneurs in manufacturing.
